

PENDING CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Previously presented) A method of reducing complement-mediated cytotoxicity in a mammal which comprises
 - identifying a mammal at risk of developing complement-mediated cytotoxicity; and
 - administering to said mammal, prior to tissue transplantation, a therapeutically effective amount of interleukin-11, wherein said amount of IL-11 reduces complement-mediated cytotoxicity in said mammal.
2. (Original) The method of claim 1, wherein the therapeutically effective amount of interleukin-11 comprises 1 to 100 $\mu\text{g}/\text{kg}$ body weight.
3. (Previously presented) A method of ameliorating complement-mediated cytotoxicity in a mammal which comprises
 - identifying a mammal at risk of developing complement-mediated cytotoxicity; and
 - administering, at the time of tissue transplantation, a therapeutically effective amount of interleukin-11, wherein said amount of IL-11 ameliorates complement-mediated cytotoxicity in said mammal.
4. (Original) The method of claim 4, wherein the therapeutically effective amount of interleukin-11 comprises 1 to 100 $\mu\text{g}/\text{kg}$ body weight.
5. (Original) The method of claim 4, wherein the interleukin-11 is administered for three days beginning on the day of the tissue transplant.
6. (Cancelled)

7. (Original) The method of claim 7, wherein the therapeutically effective amount of interleukin-11 comprises 1 to 100 µg/kg body weight.

8. (Previously presented) The method of claim 7, wherein the interleukin-11 is administered daily until improvement of the complement- mediated cytotoxicity disorder is observed.

9. (Previously presented) The method of claim 7, wherein the interleukin-11 is administered daily until remission of the complement-mediated disorder is observed.

10. (Previously presented) The method of claim 1 wherein said mammal is a human.

11. (Previously presented) The method of claim 6 wherein said mammal is a human.

12-20. (Cancelled)

21. (Previously presented) A method of treating complement-mediated cytotoxicity associated with organ or tissue transplantation in a mammal which comprises administering to said mammal a therapeutically effective amount of interleukin-11, wherein said amount of IL-11 reduces complement-mediated cytotoxicity in said mammal.

22. (Previously presented) The method of claim 21, wherein the therapeutically effective amount of interleukin-11 comprises 1 to 100 µg/kg body weight.
